Introduction

Indian banks play a crucial role in the nation's economy by facilitating financial transactions, mobilizing savings, and providing credit to various sectors. They serve as a backbone to economic growth, supporting businesses and individuals alike. The banking sector is diverse, comprising public sector banks, private sector banks, and foreign banks, each contributing uniquely to the financial landscape of India.

Project Idea

Monitor customer reviews and ratings to enhance customer service, identify areas for improvement, and ensure a better banking experience.

Data Set Used for Analysis

Columns Names:

Author, Date, Address, Bank, Rating,
Review title by user, Review, Bank image,
Rating title by user, Useful count

COUNT	
10 COLUMNS	
7 text	3 numerical
3000 Rows	

Data Issues Encountered & Recommendations

1- Missing Data Points

Missing data in columns such as **Author** so we replaced it with **"Unknown user"**

and column **Bank** name replaced with **"Unknown bank"**

2- Date Format Transformation

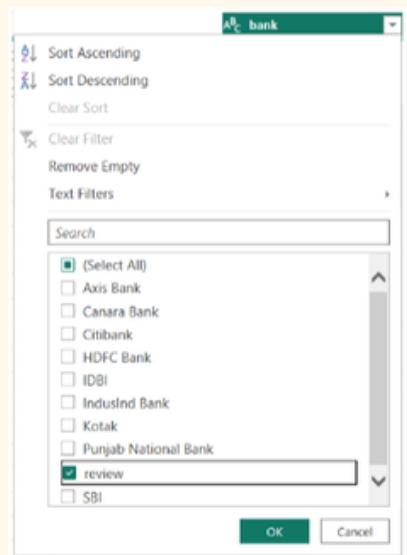

The date column was reformatted from **text-based format** (e.g., 21-Mar-20) to a consistent **numeric format** (e.g., 21/03/2020) ensuring uniformity and enabling accurate sorting, filtering, and time-series analysis.

A	B	C	date
●	Valid	100%	21/03/2020
●	Error	0%	20/03/2020
●	Empty	0%	20/03/2020
	Mar 21, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 20, 2020		20/03/2020
	Mar 19, 2020		20/03/2020
	Mar 19, 2020		20/03/2020

Data Issues Encountered & Recommendations

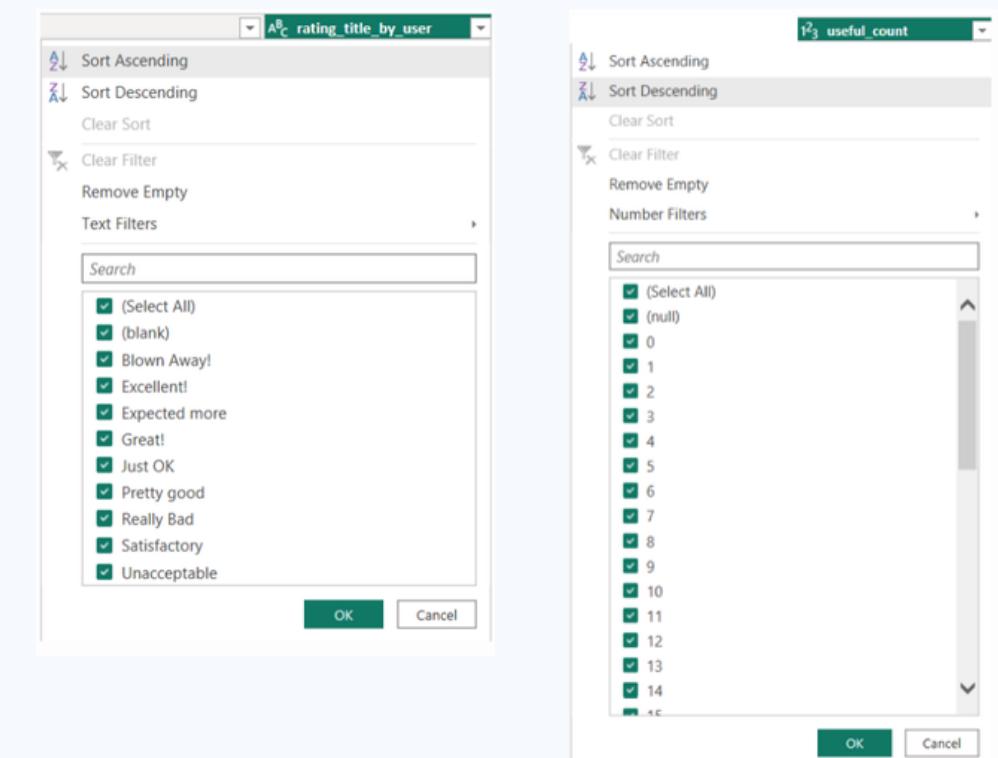

3- Handling of Invalid Entries

Entries in the **bank** column that contained the word “**review**” were considered illogical and were replaced with “**Unknown Bank**”, to avoid misclassification and maintain data integrity.

Blank entries in **Rating Title by User** were replaced with “**Untitled Review**”, to ensure every review has a descriptive title for analysis and visualization consistency.

Null values in **Useful Count** were replaced with **0**, since a missing usefulness score reasonably implies that the review has not received any usefulness votes.

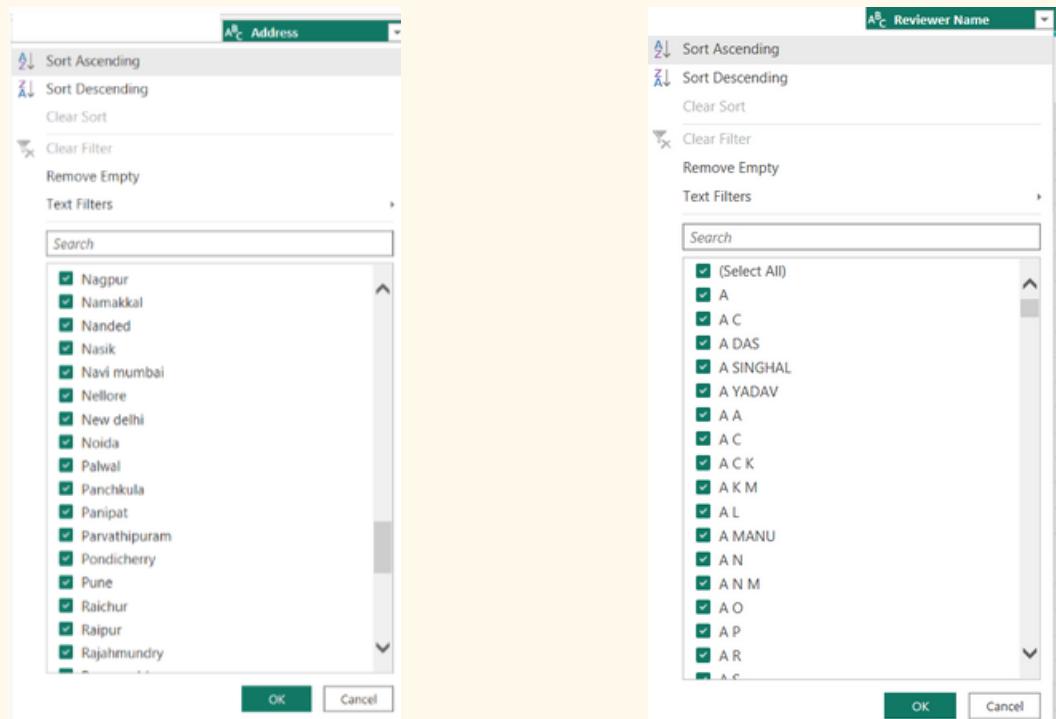

Data Issues Encountered & Recommendations

4- Author & Address Columns Standardization

Trimmed extra white spaces

Capitalized each word

5- Dataset Column Standardization

The dataset headers were standardized by capitalizing all column names and replacing underscores (_) with spaces for improved readability.

Additionally, the Author column was renamed to Reviewer to more accurately reflect the role of the person providing feedback in the dataset, and the Date column is now labeled Review Date to clearly indicate that it represents the date the review was submitted.

Created Columns for Analysis

1- Service Quality based on rate column

We grouped the given rates and categorize them

Ratings (0 - 2.5) Bad Service,

Ratings (2.5 -3.5) Good Service,

Ratings(3.5-5) Excellent Service

Add Conditional Column

Add a conditional column that is computed from the other columns or values.

New column name: Service Quality

Column Name: rating Operator: is less than or equal to Value: 2.5 Then: ABC 123 / Bad Service

Else If: rating Operator: is less than or equal to Value: 3.5 Then: ABC 123 / Good Service ...

Add Clause

Else: ABC 123 / Excellent Service

OK Cancel

Created Columns for Analysis

2- Rating Category Based on Rate Column

Groups customer feedback into predefined categories for easier analysis.

Positive (4–5),
Neutral (3),
Negative (1–2)

Add Conditional Column

Add a conditional column that is computed from the other columns or values.

New column name: Rating Category

Column Name	Operator	Value	Output
If rating	is less than or equal to	2	Then ABC 123 Negative
Else If rating	is greater than or equal to	4	Then ABC 123 Positive
Add Clause			
Else	ABC 123	Neutral	

OK Cancel

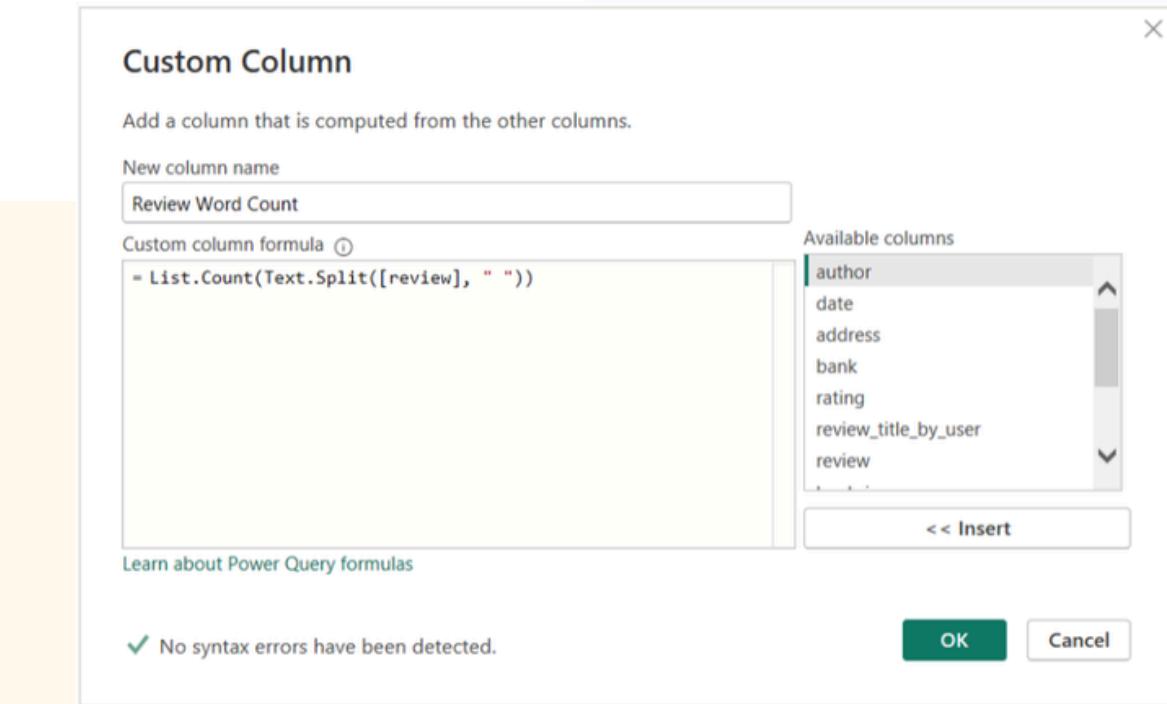

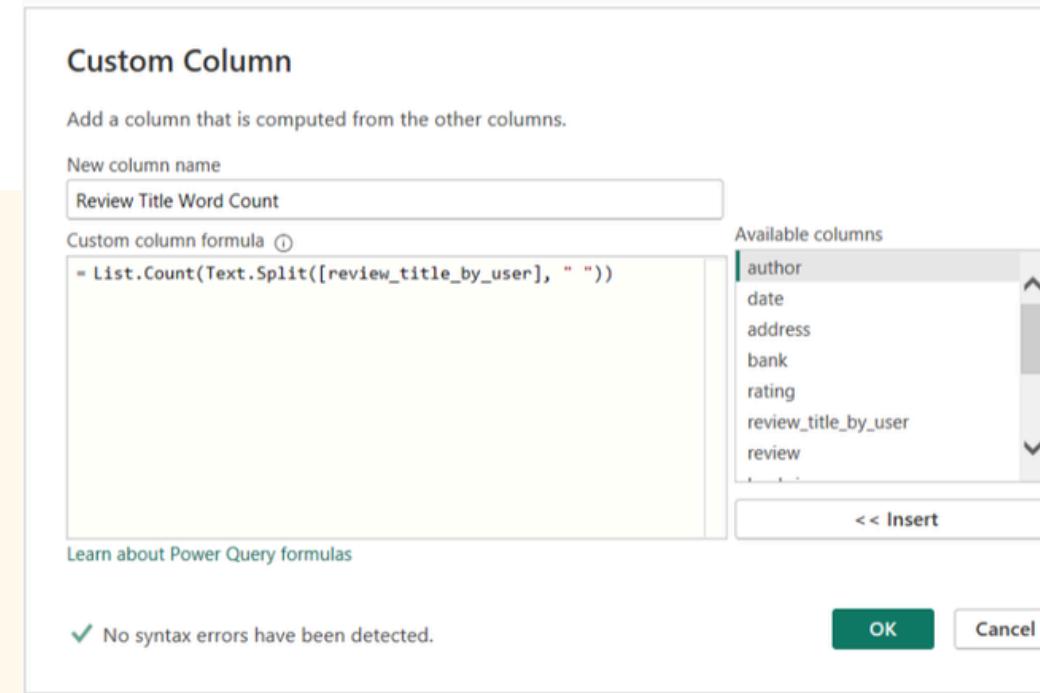

Created Columns for Analysis

3- Review Word Count & Review Title Word Count

Measures the total number of words in the review text and the review title. This provides insight into how detailed or concise customer feedback is.

Useful in Customer Review Insights to analyze patterns – for example, longer reviews may indicate more detailed experiences.

Created Columns for Analysis

4- Influential Review Based on Useful Count

An Influential Review is a binary indicator based on the Useful Count column.

- Yes → the review's Useful Count is above the 75th percentile of all reviews.
- No → the review's Useful Count is at or below this threshold.

Add Conditional Column

Add a conditional column that is computed from the other columns or values.

New column name: Influential Review

Column Name	Operator	Value	Output
Useful Count	is greater than or...	3	ABC 123 Yes

If the condition is met, the output value is "Yes".

Add Clause

Else

ABC 123	No
---------	----

OK Cancel

Created Columns for Analysis

5- City Column Based on Address

With the purpose of unifying all entries as valid cities in India. To ensure accuracy, an AI tool was used to check all unique entries from the Address column

The tool helped categorize entries into: Valid Cities, Districts, States & Variants

Category	Recommended Action (Unify as Indian Cities)
Valid Cities	Keep all as valid city entries.
Districts / Localities / Suburbs (not cities, but administrative regions)	Replace with nearest major city
States (not cities, but Union Territories)	Replace with the capital
Variants (Cities Changed its name or duplicates)	Keep only the official/modern city name for consistency

Created Columns for Analysis

5- City Column Based on Address

Non-city entries were mapped to their respective cities, and variant names were unified.

This process ensures consistency and reliability in the City column, enabling accurate location-based analysis and insights.

Replace with nearest major city	Replace with the capital	Keep only the official/modern city name for consistency
1.Hooghly → Kolkata 2.Mahabubnagar → Hyderabad 3.Mahbubnagar → Hyderabad 4.Medak → Hyderabad 5.Rangareddy → Hyderabad 6.Ernakulam → Kochi 7.Bhalswa Jahangir Pur → Delhi 8.Karawal Nagar → Delhi 9.Sultan Pur Majra → Delhi 10.Nangloi Jat → Delhi 11.North Dum dum → Kolkata 12.South Dum dum → Kolkata 13.Rajpur Sonarpur → Kolkata 14.Raurkela Industrial Township → Rourkela	1. Goa → Panaji	1.New Delhi → Delhi 2.Allahabad → Prayagraj 3.Pondicherry → Puducherry 4.Gurgaon → Gurugram 5.Tuticorin → Thoothukudi 6.Gulbarga → Kalaburagi 7.Alleppey → Alappuzha 8.Hubli → Hubballi 9.Mangalore → Mangaluru 10.Nasik → Nashik 11.Vijayanagaram → Vizianagaram 12.Hubli-Dharwad → Hubli-Dharwad 13.Hubliâ€“Dharwad → Hubli-Dharwad 14.Trivandrum → Thiruvananthapuram 15.Disabled Keonjhar → Keonjhar

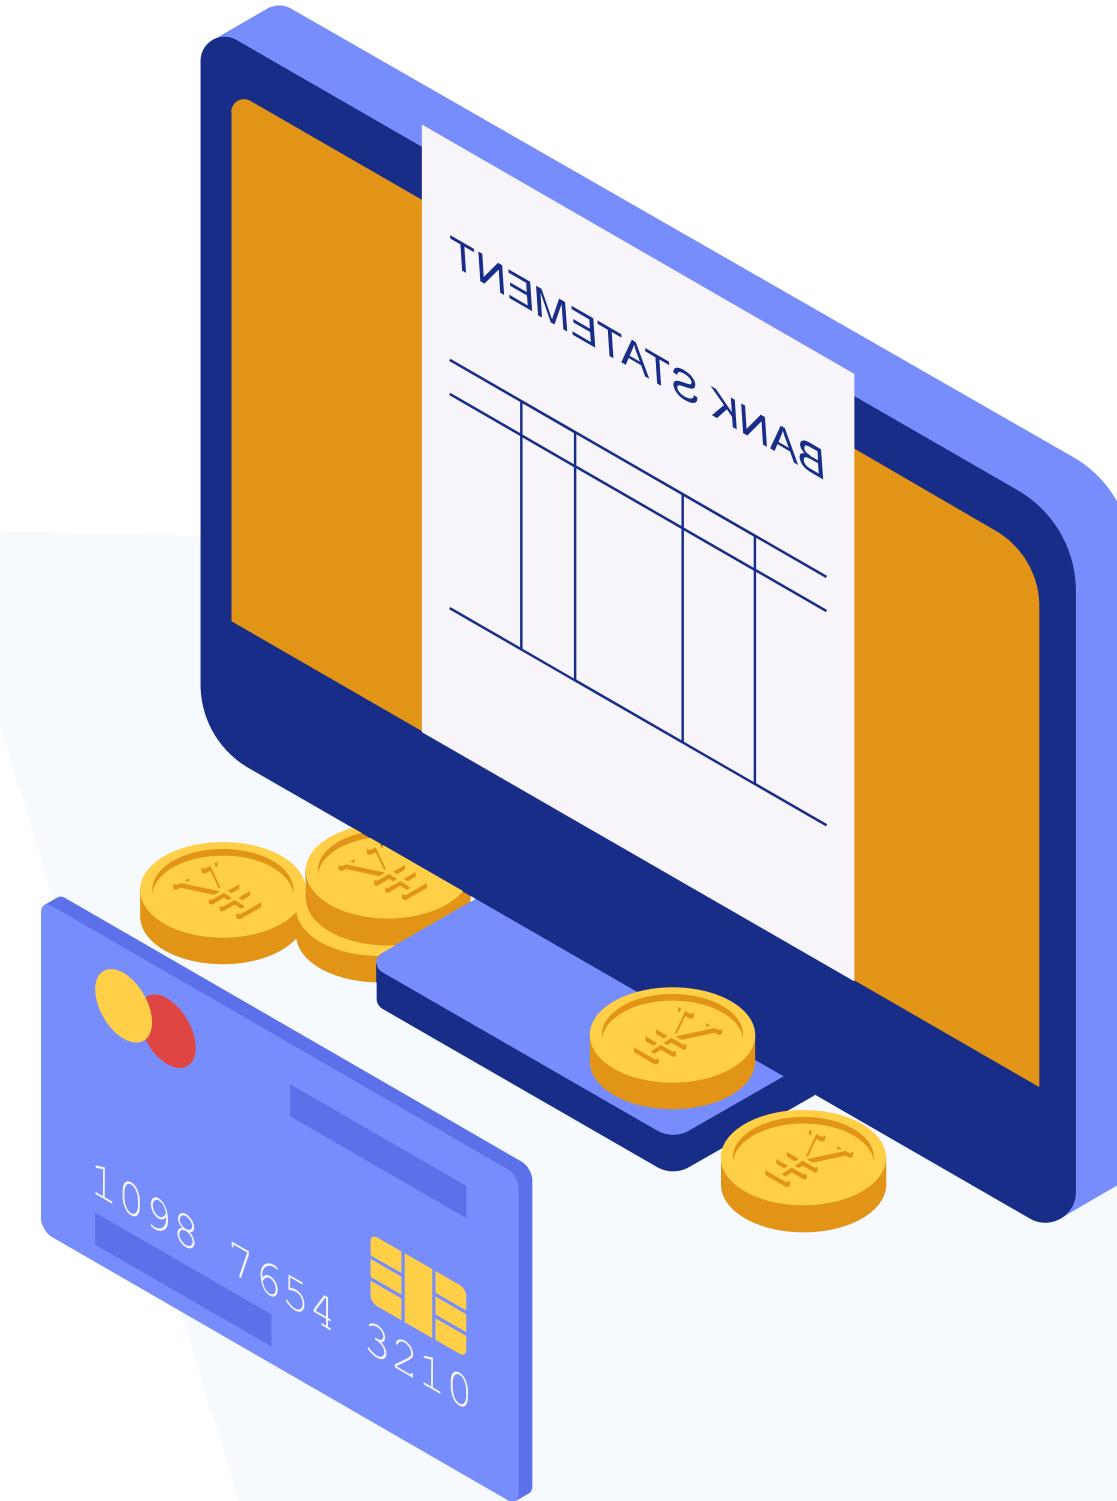

Data Model Overview

(Star Schema)

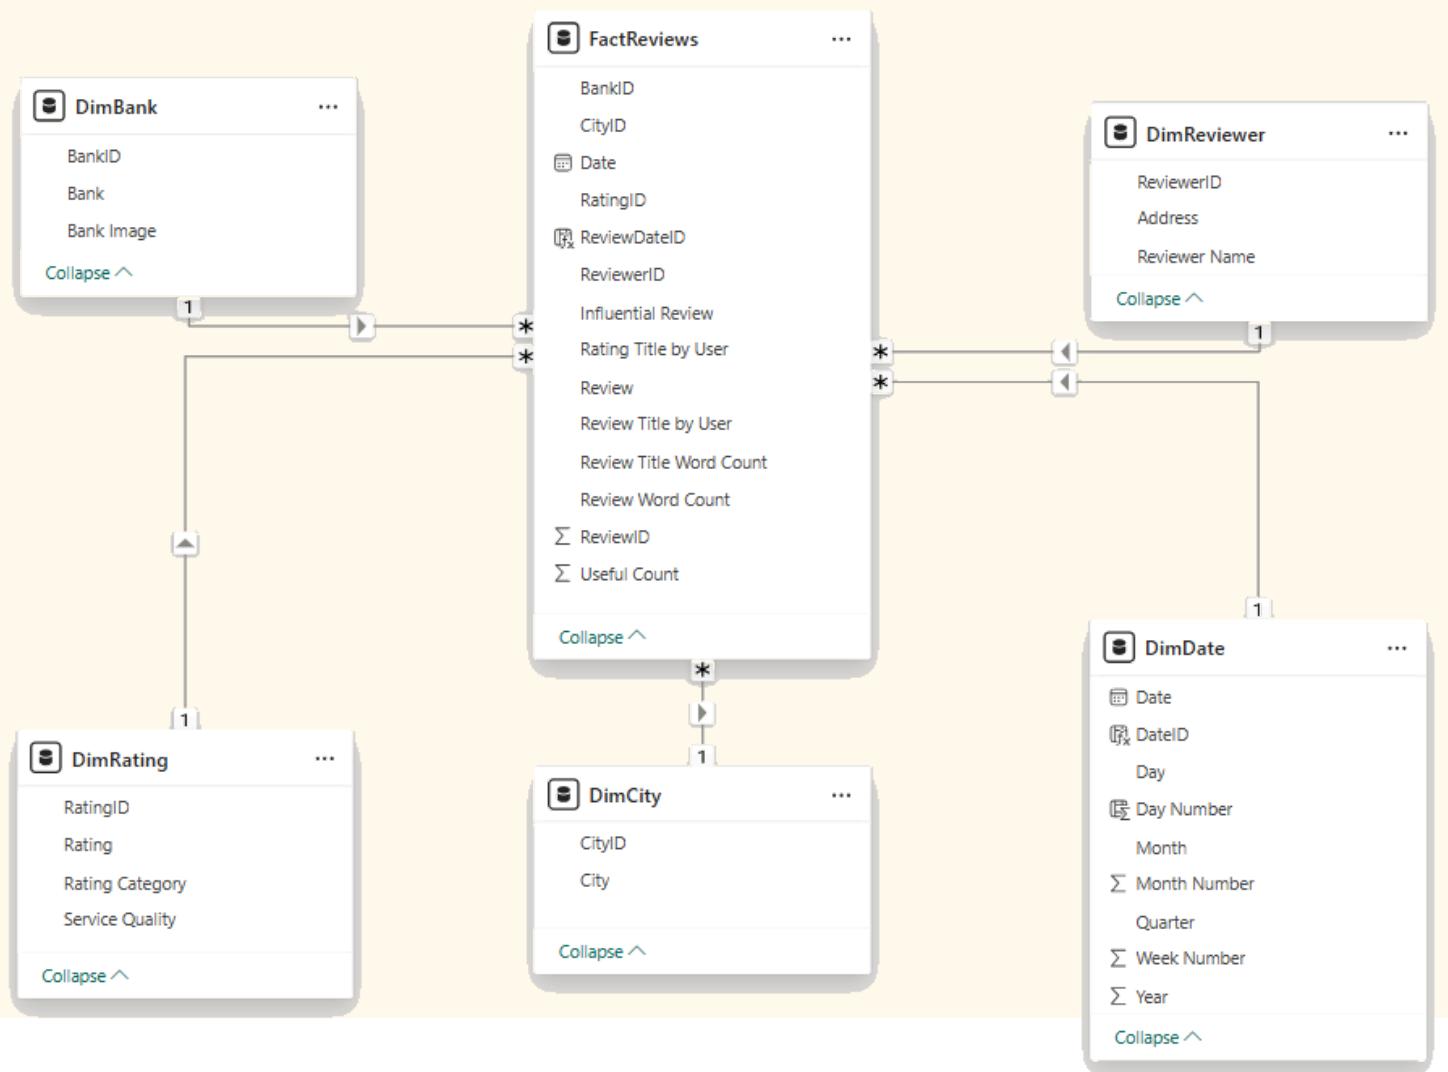

The star schema design for the dataset

Table Name	Columns	Details
DimDate	DatelD Date	Fact Create ReviewDatelD

The relationship between the fact table and dimension tables.

Dashboard Plan

The dashboard will have five pages to give a complete view of bank performance and customer feedback:

- **Overview:** Quick snapshot of overall metrics and KPIs.
- **Bank Analysis:** Compare banks across key performance indicators.
- **Service Quality Analysis:** Segment banks by service excellence and satisfaction.
- **Reviews Insights:** Analyze customer feedback and influential reviewers.
- **Time-Based Trends:** Track changes in ratings, service quality, and reviews over time.

This layout ensures clarity, actionable insights, and both high-level and detailed analysis in one dashboard.

Dashboard Pages

0- Project Summary

Objective: Offer a concise overview of the dashboard, highlighting its sections, a brief summary, a user-friendly page navigator, and the contributing team members.

Indian Banks Reviews
A Comprehensive Analysis

Dashboard Sections:

- 1- Overview** – Shows overall ratings, review volume, and customer opinions summary.
- 2- Bank Analysis** – Compares major banks across key performance metrics.
- 3- Service Quality Analysis** – Evaluates customer satisfaction and service performance.
- 4- Reviews Insights** – Highlights common themes and notable customer feedback.
- 5- Time-Based Trends** – Tracks changes in ratings, opinions, and review activity.

The Indian Banks Reviews Dashboard analyzes 3,000 customer reviews from major Indian banks to uncover insights on satisfaction and service quality. It tracks customer sentiment and identifies key areas for improvement. Overall, it helps banks enhance their services and better align with customer expectations.

Dashboard Pages Overview

1. Overview (Summary & Performance)

Objective: Provide a high-level snapshot of overall bank performance, satisfaction, and engagement across the entire dataset.

Key Metrics:

- Average Ratings,
- Total reviews,
- Average Words Count,
- Number of Cities
- Customer Feedback Breakdown

Visuals:

- KPI cards,
- Top 10 Banks by Average Rating,
- Reviews Split by Service Quality per Bank,
- Ratings vs. Reviews by Bank,
- Ratings vs. Reviews by Bank,
- Reviews Density Map

Slicers: City, Date Range.
